

New insights into the Sun

The potential of
a new generation
of solar-stellar
seismic diagnostics

How can seismic diagnostic tools for the Sun and for other stars be combined, or adapted, in order to improve our capacity to probe the physics of the Sun and stars? With this question in mind, during this workshop the different seismic tools available in the context of Helio- and Asteroseismology will be discussed, along with the physics and physical processes that they may probe.

Hotel Axis, Ponte de Lima

Portugal

16-18, September 2009

SOC Thierry Appourchaux, Thierry Corbard,
Margarida Cunha (Co-chair), Mário Monteiro,
Ian Roxburgh, Michael Thompson (Co-chair)

LOC Margarida Cunha, Isa Brandão, Manuel Monteiro, Elsa Silva
